

Self-services that are a pleasure to use

ATOSS presents innovative staff portal for time and attendance management and workforce scheduling

Munich, 17.01.2019. **Staff integration that makes companies productive and enhances job satisfaction: this was the goal that ATOSS pursued in developing the next generation of intuitive self-services in connection with time and attendance management and workforce scheduling. With its innovative [Staff Center](#), the trend-setter for workforce management once again sets the benchmark in terms of design, high-end technology and user experience.**

Staff portals provide an essential information base, enabling closer integration of both workforce and management in company processes. Using the new browser-based Staff Center by ATOSS, companies can involve their staff in time and attendance management and workforce scheduling in a very simple way. The user journey is intuitive – just as modern users expect from their familiarity with private apps. Entries are checked instantly in real time and any errors are displayed during entry; irritating waiting times and progress bars are a thing of the past.

Several million euros were invested in developing the Staff Center. Senior Product Manager Tobias Exner explains the goal of this innovative new product: “Our new Staff Center supports implementation of efficient flexibilization concepts and is simply a pleasure to use on a day-to-day basis. But we’re not just revolutionizing the area of self-services here. The Staff Center also reflects our aspiration to consistently provide state-of-the-art technology and functionality – for future-proof workforce management, whether on-premise or in the cloud.”

The user guidance based on use cases enables simple navigation in all functions – whether retroactively entering missed time stamps, applying for absences such as vacations, exchanging shifts or entering duty schedule preferences: all this is entirely intuitive and requires no training. Individual dashboards, workflows and a personal message area with outstanding and completed tasks provide precisely the information necessary for each application case. Simple navigation reduces error sources, ensuring efficiency and satisfaction at all levels. The new product makes life easier for personnel planners, superiors and HR departments, while staff motivation levels are raised due to the increase in co-determination and independent responsibility.

The Staff Center is available for the ATOSS Staff Efficiency Suite, the Enterprise solution for workforce management, and the sector solutions for retail, logistics, healthcare, production and call centers.
